

MIRRACLEAR APPLICATION GUIDE

Mirraclear is a ready to spray, automotive grade urethane clear coat, that is used as a final top coat over existing paints, to provide a gloss finish, and added durability. This clear coat can be use over almost any existing paint.

Mirraclear is highly recommended for all Alsa products as a final clear coat, such as our Killer Chrome, Base Pearls, Stylin' Base Coats, Prizmacoat, SpectraFX, and Mystic paints.

Bullet Points:

- Very high solids content.
- Ready to spray – NO MIXING
- Deep high gloss finish
- Advanced UV inhibitor Protection
- Can be used with any existing paint finish
- Best clear for chrome paints
- Lays down smooth – no orange peel effect

How To:

- 1) Always apply paints in a well-ventilated area, and wear a NIOSH approved respirator to avoid breathing any fumes.
- 2) Make sure you have good conditions for spraying. The best temperature for spraying this paint, is 75-80 degrees F, and VERY low humidity.
- 3) Apply 2-3 wet coats of Mirraclear over your existing paint, using steady even passes, from about 6-8 inches away from the substrate, with about 10-15 minutes between coats.
- 4) Mirraclear will be dry to the touch in about 2-3 hours. Allow 24 hours before handling.
